

# Framing your design question

We will be working through the questions below as a team and individually to agree a design question to take forward during the workshop.

1. What problem are you trying to solve?

2. How would you frame this challenge as a question?

3. What is the key outcome you are trying to achieve?

4. What important things do you need to consider about the context and the constraints around this?

5. What are some of the possible solutions that come to mind? Think broadly!

6. Do you need to re-phrase your design question from Q2?
